

Quantum Information Science

Comprehensive Lecture Note

Ruang Kuantum

September 10, 2025

Contents

1	From Classical to Quantum Information	11
1.1	Information Theory Fundamentals	12
1.1.1	Classical Information and Entropy	12
1.1.2	Shannon's Theorems Review	12
1.1.3	Channel Capacity and Coding	12
1.2	Quantum Information Primitives	12
1.2.1	The Qubit: Mathematical Representation	12
1.2.2	Superposition Principle	12
1.2.3	Quantum Measurement and Collapse	12
1.2.4	No-Cloning Theorem and Implications	12
1.3	Information Quantification in Quantum Systems	12
1.3.1	Von Neumann Entropy	12
1.3.2	Quantum Mutual Information	12
1.3.3	Accessible Information and Holevo Bound	12
1.3.4	Quantum Data Compression	12
1.4	Quantum Advantage Overview	12
1.4.1	Computational Supremacy	12
1.4.2	Communication Advantages	12
1.4.3	Sensing Beyond Classical Limits	12
1.4.4	Security Through Physics	12
2	Mathematical Framework	13
2.1	Linear Algebra for Quantum Mechanics	14
2.1.1	Complex Vector Spaces	14
2.1.2	Hilbert Spaces and Completeness	14
2.1.3	Linear Operators and Matrices	14
2.1.4	Eigenvalues and Eigenvectors	14
2.2	Quantum State Representation	14
2.2.1	State Vectors and Ket Notation	14
2.2.2	Density Matrices	14
2.2.3	Pure vs Mixed States	14
2.2.4	Bloch Sphere Representation	14
2.3	Quantum Operations	14
2.3.1	Unitary Operators	14
2.3.2	Hermitian Operators and Observables	14
2.3.3	Projection Operators	14
2.3.4	Completely Positive Maps	14
2.4	Composite Systems	14
2.4.1	Tensor Products	14

2.4.2	Partial Trace Operations	14
2.4.3	Schmidt Decomposition	14
2.4.4	Purification of Mixed States	14
2.5	Distance Measures and Fidelity	14
2.5.1	Trace Distance	14
2.5.2	Fidelity	14
2.5.3	Bures Metric (Generalization of Quantum Fisher Information)	14
2.6	Computational Methods	14
2.6.1	Matrix Exponentials	14
2.6.2	Numerical Techniques	14
2.6.3	Efficient Representations	14
2.6.4	Simulation Complexity	14
3	Quantum Mechanics and Measurement	15
3.1	Quantum Dynamics	16
3.1.1	Schrödinger Equation	16
3.1.2	Heisenberg Picture	16
3.1.3	Interaction Picture	16
3.1.4	Time Evolution Operators	16
3.2	Measurement Theory	16
3.2.1	Postulates of Measurement	16
3.2.2	Projective Measurements	16
3.2.3	POVM Formalism	16
3.2.4	Weak Measurements	16
3.3	Open Quantum Systems	16
3.3.1	System-Environment Interaction	16
3.3.2	Master Equations	16
3.3.3	Lindblad Form	16
3.3.4	Quantum Trajectories	16
3.4	Decoherence Models	16
3.4.1	Amplitude Damping	16
3.4.2	Phase Damping	16
3.4.3	Depolarizing Channel	16
3.4.4	General Kraus Representation	16
3.5	Quantum Control	16
3.5.1	Coherent Control	16
3.5.2	Quantum Zeno Effect	16
3.5.3	Dynamical Decoupling	16
3.5.4	Optimal Control Theory	16
3.6	Process Characterization	16
3.6.1	Quantum Process Tomography	16
3.6.2	Gate Set Tomography	16
3.6.3	Randomized Benchmarking	16
3.6.4	Characterization Protocols	16
4	Entanglement and Quantum Correlations	17
4.1	Entanglement Fundamentals	18
4.1.1	Definition and Mathematical Description	18

4.1.2	Bell States and Bell Basis	18
4.1.3	GHZ and W States	18
4.1.4	Continuous Variable Entanglement	18
4.2	Entanglement Quantification	18
4.2.1	Entropy of Entanglement	18
4.2.2	Concurrence and Tangle	18
4.2.3	Negativity and Logarithmic Negativity	18
4.2.4	Entanglement Witnesses	18
4.3	Nonlocality and Bell Inequalities	18
4.3.1	EPR Paradox	18
4.3.2	Bell's Theorem	18
4.3.3	CHSH Inequality	18
4.3.4	Experimental Violations	18
4.4	Entanglement Generation	18
4.4.1	Gate-Based Methods	18
4.4.2	Spontaneous Parametric Down-Conversion	18
4.4.3	Cavity QED Methods	18
4.4.4	Measurement-Induced Entanglement	18
4.5	Entanglement Manipulation	18
4.5.1	Entanglement Swapping	18
4.5.2	Entanglement Distillation	18
4.5.3	Entanglement Concentration	18
4.5.4	Local Operations and Classical Communication	18
4.6	Multipartite Entanglement	18
4.6.1	Classification Schemes	18
4.6.2	Genuine Multipartite Entanglement	18
4.6.3	Graph States	18
4.6.4	Entanglement Hierarchy	18
5	Quantum Circuits and Gates	19
5.1	Quantum Circuit Model	20
5.1.1	Circuit Notation and Conventions	20
5.1.2	Quantum vs Classical Circuits	20
5.1.3	Reversibility Requirements	20
5.1.4	Circuit Complexity Measures	20
5.2	Single-Qubit Gates	20
5.2.1	Pauli Gates	20
5.2.2	Hadamard Gate	20
5.2.3	Phase and T Gates	20
5.2.4	Rotation Gates	20
5.3	Multi-Qubit Gates	20
5.3.1	CNOT and Controlled Operations	20
5.3.2	Toffoli Gate	20
5.3.3	SWAP and Fredkin Gates	20
5.3.4	Controlled Phase Gates	20
5.4	Universal Gate Sets	20
5.4.1	Universality Theorems	20
5.4.2	Clifford+T Gate Set	20

5.4.3	Solovay-Kitaev Theorem	20
5.4.4	Gate Decomposition Algorithms	20
5.5	Circuit Optimization	20
5.5.1	Gate Count Minimization	20
5.5.2	Circuit Depth Reduction	20
5.5.3	Topology Mapping	20
5.5.4	Compilation Strategies	20
5.6	Advanced Circuit Techniques	20
5.6.1	Quantum Arithmetic Circuits	20
5.6.2	Oracles and Black Boxes	20
5.6.3	Ancilla Management	20
5.6.4	Measurement-Based Circuits	20
6	Quantum Algorithms - Core Primitives	21
6.1	Quantum Fourier Transform	22
6.1.1	Mathematical Definition	22
6.1.2	Circuit Implementation	22
6.1.3	Comparison with Classical FFT	22
6.1.4	Applications and Extensions	22
6.2	Phase Estimation Algorithm	22
6.2.1	Problem Statement	22
6.2.2	Algorithm Description	22
6.2.3	Precision and Resources	22
6.2.4	Iterative Phase Estimation	22
6.3	Grover's Search Algorithm	22
6.3.1	Oracle Model	22
6.3.2	Amplitude Amplification	22
6.3.3	Optimal Number of Iterations	22
6.3.4	Multiple Marked Items	22
6.4	Quantum Walks	22
6.4.1	Discrete Quantum Walks	22
6.4.2	Continuous Quantum Walks	22
6.4.3	Spatial Search Applications	22
6.4.4	Graph Algorithms	22
6.5	Linear Systems Algorithm (HHL)	22
6.5.1	Problem Formulation	22
6.5.2	Algorithm Components	22
6.5.3	Condition Number Dependencies	22
6.5.4	Practical Considerations	22
6.6	Algorithm Complexity Analysis	22
6.6.1	Query Complexity	22
6.6.2	Gate Complexity	22
6.6.3	Space Requirements	22
6.6.4	Error Propagation	22
7	NISQ Algorithms and Variational Methods	23
7.1	NISQ Era Constraints	24
7.1.1	Hardware Limitations	24

7.1.2	Noise Models	24
7.1.3	Connectivity Restrictions	24
7.1.4	Coherence Time Limits	24
7.2	Variational Quantum Eigensolver (VQE)	24
7.2.1	Algorithm Framework	24
7.2.2	Ansatz Design	24
7.2.3	Classical Optimization	24
7.2.4	Applications in Quantum Chemistry	24
7.3	Quantum Approximate Optimization Algorithm (QAOA)	24
7.3.1	Combinatorial Optimization Problems	24
7.3.2	Circuit Structure	24
7.3.3	Parameter Optimization	24
7.3.4	Performance Analysis	24
7.4	Quantum Machine Learning	24
7.4.1	Quantum Neural Networks	24
7.4.2	Quantum Kernel Methods	24
7.4.3	Quantum Feature Maps	24
7.4.4	Hybrid Training Approaches	24
7.5	Error Mitigation Techniques	24
7.5.1	Zero-Noise Extrapolation	24
7.5.2	Probabilistic Error Cancellation	24
7.5.3	Symmetry Verification	24
7.5.4	Virtual Distillation	24
7.6	Optimization Strategies	24
7.6.1	Gradient Estimation Methods	24
7.6.2	Barren Plateau Avoidance	24
7.6.3	Hardware-Efficient Ansätze	24
7.6.4	Circuit Cutting Techniques	24
8	Quantum Communication Protocols	25
8.1	Quantum Teleportation	26
8.1.1	Protocol Description	26
8.1.2	Resource Requirements	26
8.1.3	Fidelity Analysis	26
8.1.4	Experimental Implementations	26
8.2	Superdense Coding	26
8.2.1	Protocol Framework	26
8.2.2	Channel Capacity Enhancement	26
8.2.3	Practical Limitations	26
8.2.4	Applications	26
8.3	Quantum State Transfer	26
8.3.1	Direct Transfer Methods	26
8.3.2	Spin Chain Transfer	26
8.3.3	Flying Qubits	26
8.3.4	Interface Design	26
8.4	Quantum Channel Capacity	26
8.4.1	Classical Capacity	26
8.4.2	Quantum Capacity	26

8.4.3	Entanglement-Assisted Capacity	26
8.4.4	Private Capacity	26
8.5	Advanced Protocols	26
8.5.1	Remote State Preparation	26
8.5.2	Quantum Secret Sharing	26
8.5.3	Anonymous Communication	26
8.5.4	Quantum Digital Signatures	26
8.6	Protocol Security and Efficiency	26
8.6.1	Security Models	26
8.6.2	Resource Analysis	26
8.6.3	Noise Tolerance	26
8.6.4	Implementation Trade-offs	26
9	Quantum Key Distribution Systems	27
9.1	Discrete Variable QKD Protocols	28
9.1.1	BB84 Protocol	28
9.1.2	B92 Protocol	28
9.1.3	Six-State Protocol	28
9.1.4	SARG04 Protocol	28
9.2	Entanglement-Based QKD	28
9.2.1	E91 Protocol	28
9.2.2	BBM92 Protocol	28
9.2.3	Device-Independent QKD	28
9.2.4	Measurement-Device-Independent QKD	28
9.3	Continuous Variable QKD	28
9.3.1	Gaussian Modulation	28
9.3.2	Discrete Modulation	28
9.3.3	Homodyne Detection	28
9.3.4	Heterodyne Detection	28
9.4	Security Analysis	28
9.4.1	Information-Theoretic Security	28
9.4.2	Finite-Key Effects	28
9.4.3	Composable Security	28
9.4.4	Side-Channel Attacks	28
9.5	Classical Post-Processing	28
9.5.1	Sifting and Basis Reconciliation	28
9.5.2	Error Correction	28
9.5.3	Privacy Amplification	28
9.5.4	Authentication	28
9.6	QKD Systems Engineering	28
9.6.1	Hardware Components	28
9.6.2	System Integration	28
9.6.3	Network Deployment	28
9.6.4	Commercial Systems	28
10	Quantum Sensing and Metrology	29
10.1	Quantum Parameter Estimation	30
10.1.1	Fisher Information	30

10.1.2	Quantum Fisher Information	30
10.1.3	Cramér-Rao Bound	30
10.1.4	Heisenberg Limit	30
10.2	Quantum Interferometry	30
10.2.1	Mach-Zehnder Interferometer	30
10.2.2	SU(1,1) Interferometer	30
10.2.3	NOON States	30
10.2.4	Phase Estimation Protocols	30
10.3	Squeezed State Sensing	30
10.3.1	Quadrature Squeezing	30
10.3.2	Spin Squeezing	30
10.3.3	Two-Mode Squeezing	30
10.3.4	Applications in Interferometry	30
10.4	Quantum Imaging	30
10.4.1	Ghost Imaging	30
10.4.2	Quantum Illumination	30
10.4.3	Sub-Wavelength Imaging	30
10.4.4	Quantum Microscopy	30
10.5	Specific Sensing Applications	30
10.5.1	Magnetometry	30
10.5.2	Gravimetry	30
10.5.3	Clock Synchronization	30
10.5.4	Chemical Sensing	30
10.6	Sensor Networks and Arrays	30
10.6.1	Distributed Sensing	30
10.6.2	Entanglement-Enhanced Networks	30
10.6.3	Data Fusion	30
10.6.4	Optimal Probe States	30
11	Quantum Error Correction	31
11.1	Error Models and Syndrome Extraction	32
11.1.1	Pauli Error Models	32
11.1.2	Syndrome Measurements	32
11.1.3	Error Detection vs Correction	32
11.1.4	Fault-Tolerant Syndrome Extraction	32
11.2	Stabilizer Codes	32
11.2.1	Stabilizer Formalism	32
11.2.2	Encoding and Decoding	32
11.2.3	Logical Operations	32
11.2.4	Code Distance and Rate	32
11.3	Specific Code Families	32
11.3.1	CSS Codes	32
11.3.2	Surface Codes	32
11.3.3	Color Codes	32
11.3.4	Quantum LDPC Codes	32
11.4	Topological Codes	32
11.4.1	Toric Code	32
11.4.2	Planar Codes	32

11.4.3	Anyonic Excitations	32
11.4.4	Topological Protection	32
11.5	Fault-Tolerant Computing	32
11.5.1	Threshold Theorems	32
11.5.2	Transversal Gates	32
11.5.3	Magic State Distillation	32
11.5.4	Code Switching	32
11.6	Decoder Design	32
11.6.1	Maximum Likelihood Decoding	32
11.6.2	Minimum Weight Matching	32
11.6.3	Belief Propagation	32
11.6.4	Machine Learning Decoders	32
12	Quantum Hardware Platforms	33
12.1	Superconducting Qubits	34
12.1.1	Josephson Junctions	34
12.1.2	Transmon Qubits	34
12.1.3	Flux Qubits	34
12.1.4	Control and Readout	34
12.2	Trapped Ion Systems	34
12.2.1	Ion Trapping Techniques	34
12.2.2	Laser Cooling	34
12.2.3	Gate Implementation	34
12.2.4	Ion Shuttling	34
12.3	Photonic Quantum Computing	34
12.3.1	Linear Optical Quantum Computing	34
12.3.2	Measurement-Based Computing	34
12.3.3	Integrated Photonics	34
12.3.4	Photonic Interconnects	34
12.4	Neutral Atom Platforms	34
12.4.1	Optical Lattices	34
12.4.2	Rydberg Atoms	34
12.4.3	Optical Tweezers	34
12.4.4	Many-Body Physics	34
12.5	Solid-State Platforms	34
12.5.1	Silicon Quantum Dots	34
12.5.2	Nitrogen-Vacancy Centers	34
12.5.3	Topological Qubits	34
12.5.4	Hybrid Systems	34
12.6	Control Systems Engineering	34
12.6.1	Pulse Generation and Shaping	34
12.6.2	Feedback Control	34
12.6.3	Calibration Procedures	34
12.6.4	System Integration	34
13	Quantum Networks and Internet	35
13.1	Quantum Network Architecture	36
13.1.1	Network Topologies	36

13.1.2	Quantum Repeaters	36
13.1.3	Quantum Routers	36
13.1.4	End-to-End Connectivity	36
13.2	Physical Layer	36
13.2.1	Quantum Channels (Fiber, Free-Space)	36
13.2.2	Wavelength Division Multiplexing	36
13.2.3	Mode Conversion	36
13.2.4	Quantum Transduction	36
13.3	Link Layer Protocols	36
13.3.1	Entanglement Generation	36
13.3.2	Link-Level Error Correction	36
13.3.3	Entanglement Purification	36
13.3.4	Multiplexing Strategies	36
13.4	Network Layer Functions	36
13.4.1	Routing Protocols	36
13.4.2	Entanglement Swapping	36
13.4.3	Path Selection	36
13.4.4	Network Coding	36
13.5	Application Layer Services	36
13.5.1	Distributed Computing	36
13.5.2	Clock Synchronization	36
13.5.3	Distributed Sensing	36
13.5.4	Secure Multiparty Computation	36
13.6	Network Management	36
13.6.1	Resource Allocation	36
13.6.2	Quality of Service	36
13.6.3	Network Monitoring	36
13.6.4	Software-Defined Quantum Networks	36

Chapter 1

From Classical to Quantum Information

1.1 Information Theory Fundamentals

1.1.1 Classical Information and Entropy

1.1.2 Shannon's Theorems Review

1.1.3 Channel Capacity and Coding

1.2 Quantum Information Primitives

1.2.1 The Qubit: Mathematical Representation

1.2.2 Superposition Principle

1.2.3 Quantum Measurement and Collapse

1.2.4 No-Cloning Theorem and Implications

1.3 Information Quantification in Quantum Systems

1.3.1 Von Neumann Entropy

1.3.2 Quantum Mutual Information

1.3.3 Accessible Information and Holevo Bound

1.3.4 Quantum Data Compression

1.4 Quantum Advantage Overview

1.4.1 Computational Supremacy

1.4.2 Communication Advantages

1.4.3 Sensing Beyond Classical Limits

1.4.4 Security Through Physics

Chapter 2

Mathematical Framework

2.1 Linear Algebra for Quantum Mechanics

2.1.1 Complex Vector Spaces

2.1.2 Hilbert Spaces and Completeness

2.1.3 Linear Operators and Matrices

2.1.4 Eigenvalues and Eigenvectors

2.2 Quantum State Representation

2.2.1 State Vectors and Ket Notation

2.2.2 Density Matrices

2.2.3 Pure vs Mixed States

2.2.4 Bloch Sphere Representation

2.3 Quantum Operations

2.3.1 Unitary Operators

2.3.2 Hermitian Operators and Observables

2.3.3 Projection Operators

2.3.4 Completely Positive Maps

2.4 Composite Systems

2.4.1 Tensor Products

2.4.2 Partial Trace Operations

2.4.3 Schmidt Decomposition

2.4.4 Purification of Mixed States

2.5 Distance Measures and Fidelity

Chapter 3

Quantum Mechanics and Measurement

3.1 Quantum Dynamics

3.1.1 Schrödinger Equation

3.1.2 Heisenberg Picture

3.1.3 Interaction Picture

3.1.4 Time Evolution Operators

3.2 Measurement Theory

3.2.1 Postulates of Measurement

3.2.2 Projective Measurements

3.2.3 POVM Formalism

3.2.4 Weak Measurements

3.3 Open Quantum Systems

3.3.1 System-Environment Interaction

3.3.2 Master Equations

3.3.3 Lindblad Form

3.3.4 Quantum Trajectories

3.4 Decoherence Models

3.4.1 Amplitude Damping

3.4.2 Phase Damping

3.4.3 Depolarizing Channel

3.4.4 General Kraus Representation

3.5 Quantum Control

Chapter 4

Entanglement and Quantum Correlations

4.1 Entanglement Fundamentals

4.1.1 Definition and Mathematical Description

4.1.2 Bell States and Bell Basis

4.1.3 GHZ and W States

4.1.4 Continuous Variable Entanglement

4.2 Entanglement Quantification

4.2.1 Entropy of Entanglement

4.2.2 Concurrence and Tangle

4.2.3 Negativity and Logarithmic Negativity

4.2.4 Entanglement Witnesses

4.3 Nonlocality and Bell Inequalities

4.3.1 EPR Paradox

4.3.2 Bell's Theorem

4.3.3 CHSH Inequality

4.3.4 Experimental Violations

4.4 Entanglement Generation

4.4.1 Gate-Based Methods

4.4.2 Spontaneous Parametric Down-Conversion

4.4.3 Cavity QED Methods

4.4.4 Measurement-Induced Entanglement

4.5 Entanglement Manipulation

Chapter 5

Quantum Circuits and Gates

5.1 Quantum Circuit Model

5.1.1 Circuit Notation and Conventions

5.1.2 Quantum vs Classical Circuits

5.1.3 Reversibility Requirements

5.1.4 Circuit Complexity Measures

5.2 Single-Qubit Gates

5.2.1 Pauli Gates

5.2.2 Hadamard Gate

5.2.3 Phase and T Gates

5.2.4 Rotation Gates

5.3 Multi-Qubit Gates

5.3.1 CNOT and Controlled Operations

5.3.2 Toffoli Gate

5.3.3 SWAP and Fredkin Gates

5.3.4 Controlled Phase Gates

5.4 Universal Gate Sets

5.4.1 Universality Theorems

5.4.2 Clifford+T Gate Set

5.4.3 Solovay-Kitaev Theorem

5.4.4 Gate Decomposition Algorithms

5.5 Circuit Optimization

Chapter 6

Quantum Algorithms - Core Primitives

6.1 Quantum Fourier Transform

6.1.1 Mathematical Definition

6.1.2 Circuit Implementation

6.1.3 Comparison with Classical FFT

6.1.4 Applications and Extensions

6.2 Phase Estimation Algorithm

6.2.1 Problem Statement

6.2.2 Algorithm Description

6.2.3 Precision and Resources

6.2.4 Iterative Phase Estimation

6.3 Grover's Search Algorithm

6.3.1 Oracle Model

6.3.2 Amplitude Amplification

6.3.3 Optimal Number of Iterations

6.3.4 Multiple Marked Items

6.4 Quantum Walks

6.4.1 Discrete Quantum Walks

6.4.2 Continuous Quantum Walks

6.4.3 Spatial Search Applications

6.4.4 Graph Algorithms

6.5 Linear Systems Algorithm (HHL)

Chapter 7

NISQ Algorithms and Variational Methods

7.1 NISQ Era Constraints

7.1.1 Hardware Limitations

7.1.2 Noise Models

7.1.3 Connectivity Restrictions

7.1.4 Coherence Time Limits

7.2 Variational Quantum Eigensolver (VQE)

7.2.1 Algorithm Framework

7.2.2 Ansatz Design

7.2.3 Classical Optimization

7.2.4 Applications in Quantum Chemistry

7.3 Quantum Approximate Optimization Algorithm (QAOA)

7.3.1 Combinatorial Optimization Problems

7.3.2 Circuit Structure

7.3.3 Parameter Optimization

7.3.4 Performance Analysis

7.4 Quantum Machine Learning

7.4.1 Quantum Neural Networks

7.4.2 Quantum Kernel Methods

7.4.3 Quantum Feature Maps

7.4.4 Hybrid Training Approaches

Chapter 8

Quantum Communication Protocols

8.1 Quantum Teleportation

8.1.1 Protocol Description

8.1.2 Resource Requirements

8.1.3 Fidelity Analysis

8.1.4 Experimental Implementations

8.2 Superdense Coding

8.2.1 Protocol Framework

8.2.2 Channel Capacity Enhancement

8.2.3 Practical Limitations

8.2.4 Applications

8.3 Quantum State Transfer

8.3.1 Direct Transfer Methods

8.3.2 Spin Chain Transfer

8.3.3 Flying Qubits

8.3.4 Interface Design

8.4 Quantum Channel Capacity

8.4.1 Classical Capacity

8.4.2 Quantum Capacity

8.4.3 Entanglement-Assisted Capacity

8.4.4 Private Capacity

8.5 Advanced Protocols

Chapter 9

Quantum Key Distribution Systems

9.1 Discrete Variable QKD Protocols

9.1.1 BB84 Protocol

9.1.2 B92 Protocol

9.1.3 Six-State Protocol

9.1.4 SARG04 Protocol

9.2 Entanglement-Based QKD

9.2.1 E91 Protocol

9.2.2 BBM92 Protocol

9.2.3 Device-Independent QKD

9.2.4 Measurement-Device-Independent QKD

9.3 Continuous Variable QKD

9.3.1 Gaussian Modulation

9.3.2 Discrete Modulation

9.3.3 Homodyne Detection

9.3.4 Heterodyne Detection

9.4 Security Analysis

9.4.1 Information-Theoretic Security

9.4.2 Finite-Key Effects

9.4.3 Composable Security

9.4.4 Side-Channel Attacks

9.5 Classical Post-Processing

Chapter 10

Quantum Sensing and Metrology

10.1 Quantum Parameter Estimation

10.1.1 Fisher Information

10.1.2 Quantum Fisher Information

10.1.3 Cramér-Rao Bound

10.1.4 Heisenberg Limit

10.2 Quantum Interferometry

10.2.1 Mach-Zehnder Interferometer

10.2.2 $SU(1,1)$ Interferometer

10.2.3 NOON States

10.2.4 Phase Estimation Protocols

10.3 Squeezed State Sensing

10.3.1 Quadrature Squeezing

10.3.2 Spin Squeezing

10.3.3 Two-Mode Squeezing

10.3.4 Applications in Interferometry

10.4 Quantum Imaging

10.4.1 Ghost Imaging

10.4.2 Quantum Illumination

10.4.3 Sub-Wavelength Imaging

10.4.4 Quantum Microscopy

10.5 Specific Sensing Applications

Chapter 11

Quantum Error Correction

11.1 Error Models and Syndrome Extraction

11.1.1 Pauli Error Models

11.1.2 Syndrome Measurements

11.1.3 Error Detection vs Correction

11.1.4 Fault-Tolerant Syndrome Extraction

11.2 Stabilizer Codes

11.2.1 Stabilizer Formalism

11.2.2 Encoding and Decoding

11.2.3 Logical Operations

11.2.4 Code Distance and Rate

11.3 Specific Code Families

11.3.1 CSS Codes

11.3.2 Surface Codes

11.3.3 Color Codes

11.3.4 Quantum LDPC Codes

11.4 Topological Codes

11.4.1 Toric Code

11.4.2 Planar Codes

11.4.3 Anyonic Excitations

11.4.4 Topological Protection

11.5 Fault-Tolerant Computing

Chapter 12

Quantum Hardware Platforms

12.1 Superconducting Qubits

12.1.1 Josephson Junctions

12.1.2 Transmon Qubits

12.1.3 Flux Qubits

12.1.4 Control and Readout

12.2 Trapped Ion Systems

12.2.1 Ion Trapping Techniques

12.2.2 Laser Cooling

12.2.3 Gate Implementation

12.2.4 Ion Shuttling

12.3 Photonic Quantum Computing

12.3.1 Linear Optical Quantum Computing

12.3.2 Measurement-Based Computing

12.3.3 Integrated Photonics

12.3.4 Photonic Interconnects

12.4 Neutral Atom Platforms

12.4.1 Optical Lattices

12.4.2 Rydberg Atoms

12.4.3 Optical Tweezers

12.4.4 Many-Body Physics

12.5 Solid-State Platforms

Chapter 13

Quantum Networks and Internet

13.1 Quantum Network Architecture

13.1.1 Network Topologies

13.1.2 Quantum Repeaters

13.1.3 Quantum Routers

13.1.4 End-to-End Connectivity

13.2 Physical Layer

13.2.1 Quantum Channels (Fiber, Free-Space)

13.2.2 Wavelength Division Multiplexing

13.2.3 Mode Conversion

13.2.4 Quantum Transduction

13.3 Link Layer Protocols

13.3.1 Entanglement Generation

13.3.2 Link-Level Error Correction

13.3.3 Entanglement Purification

13.3.4 Multiplexing Strategies

13.4 Network Layer Functions

13.4.1 Routing Protocols

13.4.2 Entanglement Swapping

13.4.3 Path Selection

13.4.4 Network Coding

13.5 Application Layer Services
