

Quantum Information Science

Comprehensive Lecture Note

Ruang Kuantum

November 10, 2025

Contents

1	From Classical to Quantum Information	1
1.1	Classical Information Fundamentals	1
1.1.1	Classical Bits and Logic Gates	1
1.1.2	Shannon's Entropy and Review	1
1.2	Introducing the Qubit (The Quantum Bit)	1
1.2.1	The Qubit: An Information Unit	1
1.2.2	Superposition (The State Space)	1
1.2.3	Entanglement (The Correlation)	1
1.3	The Rules of Quantum Computation	1
1.3.1	Quantum Measurement and Collapse	1
1.3.2	No-Cloning Theorem: Why It Matters	1
2	Essential Linear Algebra Toolkit	3
2.1	Complex Numbers Primer	3
2.1.1	Arithmetic and Polar Form	3
2.1.2	Visualizing Complex Numbers	3
2.2	Vectors and Quantum States	3
2.2.1	Vector Spaces and Basis Vectors	3
2.2.2	Ket Notation ($ \psi\rangle$)	3
2.2.3	Inner Products and Normalization	3
2.3	Matrices and Quantum Gates	3
2.3.1	Matrix Multiplication Review	3
2.3.2	Unitary Matrices	3
2.4	Composite Systems	3
2.4.1	Tensor Products (\otimes)	3
2.4.2	Combining n Qubits	3
3	Quantum Circuits and Single-Qubit Gates	5
3.1	The Quantum Circuit Model	5
3.1.1	Circuit Notation and Wire Diagram	5
3.1.2	Reversibility and Unitarity	5
3.2	Key Single-Qubit Gates	5
3.2.1	The Pauli Gates (X, Y, Z)	5
3.2.2	The Hadamard Gate (H)	5
3.2.3	Phase and T Gates (for Universal Sets)	5
3.3	The Bloch Sphere Representation	5
3.3.1	Visualizing a Single Qubit State	5
3.3.2	Rotation Gates (R_x, R_y, R_z)	5

4 Multi-Qubit Gates and Universality	7
4.1 Entangling Gates	7
4.1.1 CNOT (Controlled-NOT) Gate	7
4.1.2 Controlled Phase and SWAP Gates	7
4.2 Universal Gate Sets	7
4.2.1 What Does Universality Mean?	7
4.2.2 Clifford + T Set	7
4.3 Simple Quantum Algorithms (Examples)	7
4.3.1 Deutsch-Jozsa Algorithm	7
4.3.2 Quantum Parallelism in Practice	7
5 Quantum Algorithms I: Searching and Factoring	9
5.1 Mathematical Tool: Quantum Fourier Transform (QFT)	9
5.1.1 Definition and Purpose	9
5.1.2 Circuit Implementation Overview	9
5.2 Phase Estimation Algorithm	9
5.2.1 The Core Idea	9
5.2.2 Applications (Period Finding)	9
5.3 Shor's Factoring Algorithm	9
5.3.1 Problem of Factoring	9
5.3.2 The Algorithm's Structure	9
5.4 Grover's Search Algorithm	9
5.4.1 Unstructured Search Problem	9
5.4.2 Amplitude Amplification	9
5.4.3 Comparison: Speedup vs Classical	9
6 Quantum Communication and Information Theory	11
6.1 Quantum Information Compression	11
6.1.1 Von Neumann Entropy (Simple Definition)	11
6.1.2 Quantum Data Compression (Schumacher)	11
6.2 Communication Protocols	11
6.2.1 Quantum Teleportation	11
6.2.2 Superdense Coding	11
6.3 Security Through QKD	11
6.3.1 BB84 Protocol (Discrete Variable QKD)	11
6.3.2 E91 (Entanglement-Based QKD)	11
7 Quantum Algorithms II: NISQ Algorithms and Hybrid Computation	13
7.1 The NISQ Era	13
7.1.1 Hardware Limitations and Noise Models	13
7.1.2 The Need for Hybrid Algorithms	13
7.2 Variational Quantum Eigensolver (VQE)	13
7.2.1 Algorithm Framework	13
7.2.2 Classical Optimization Loop	13
7.3 Quantum Approximate Optimization Algorithm (QAOA)	13
7.3.1 Optimization Problems (MaxCut, etc.)	13
7.3.2 Circuit Structure and Parameterization	13
7.4 Quantum Machine Learning (QML)	13
7.4.1 Hybrid Training Approaches	13

8 Quantum Sensing and Metrology	15
8.1 Limits of Measurement	15
8.1.1 Classical Noise and the Shot Noise Limit	15
8.1.2 Quantum Enhanced Sensing	15
8.1.3 Heisenberg Limit	15
8.2 Key Techniques	15
8.2.1 NOON States (for Phase Estimation)	15
8.2.2 Squeezed States (Intuitive)	15
8.3 Specific Sensing Applications	15
8.3.1 Quantum Magnetometry (NV-Centers)	15
8.3.2 Clock Synchronization	15
9 Open Systems and Decoherence	17
9.1 System-Environment Interaction	17
9.1.1 What is Decoherence?	17
9.1.2 Amplitude and Phase Damping Models	17
9.2 The Density Matrix	17
9.2.1 Representing Mixed States	17
9.2.2 Pure vs. Mixed States	17
9.3 Introduction to Quantum Control	17
9.3.1 Quantum Zeno Effect (Concept)	17
9.3.2 Dynamical Decoupling (Concept)	17
10 Quantum Error Correction (QEC) Fundamentals	19
10.1 Why QEC is Necessary	19
10.1.1 The Fragility of Quantum Information	19
10.1.2 Syndrome Measurement Concept	19
10.2 Basic Quantum Codes	19
10.2.1 The Three-Qubit Code (Bit-Flip)	19
10.2.2 Shor's Nine-Qubit Code (Overview)	19
10.3 Introduction to Stabilizer Codes	19
10.3.1 Stabilizer Formalism (Simplified)	19
10.3.2 Logical Qubits and Encoding	19
11 Quantum Hardware Platforms	21
11.1 Key Hardware Requirements	21
11.1.1 Qubit Quality (Fidelity, Coherence Time)	21
11.1.2 Scaling and Connectivity	21
11.2 Major Qubit Technologies	21
11.2.1 Superconducting Qubits (Transmons)	21
11.2.2 Trapped Ion Systems	21
11.2.3 Photonic Quantum Computing	21
11.3 Control and Readout	21
11.3.1 Pulse Generation Overview	21
11.3.2 Measurement Process	21
12 Quantum Networking and Future	23
12.1 Quantum Networks vs Internet	23
12.1.1 Goals and Challenges	23

12.1.2	Quantum Repeaters (Concept)	23
12.2	Distributed Quantum Services	23
12.2.1	Quantum Clock Synchronization	23
12.2.2	Secure Multiparty Computation	23
12.3	The Road to Fault Tolerance	23
12.3.1	Threshold Theorems (Intuitive)	23
12.3.2	The Quantum Ecosystem	23

Chapter 1

From Classical to Quantum Information

1.1 Classical Information Fundamentals

1.1.1 Classical Bits and Logic Gates

1.1.2 Shannon's Entropy and Review

1.2 Introducing the Qubit (The Quantum Bit)

1.2.1 The Qubit: An Information Unit

1.2.2 Superposition (The State Space)

1.2.3 Entanglement (The Correlation)

1.3 The Rules of Quantum Computation

1.3.1 Quantum Measurement and Collapse

1.3.2 No-Cloning Theorem: Why It Matters

Chapter 2

Essential Linear Algebra Toolkit

2.1 Complex Numbers Primer

2.1.1 Arithmetic and Polar Form

2.1.2 Visualizing Complex Numbers

2.2 Vectors and Quantum States

2.2.1 Vector Spaces and Basis Vectors

2.2.2 Ket Notation ($|\psi\rangle$)

2.2.3 Inner Products and Normalization

2.3 Matrices and Quantum Gates

2.3.1 Matrix Multiplication Review

2.3.2 Unitary Matrices

2.4 Composite Systems

2.4.1 Tensor Products (\otimes)

2.4.2 Combining n Qubits

Chapter 3

Quantum Circuits and Single-Qubit Gates

3.1 The Quantum Circuit Model

3.1.1 Circuit Notation and Wire Diagram

3.1.2 Reversibility and Unitarity

3.2 Key Single-Qubit Gates

3.2.1 The Pauli Gates (X, Y, Z)

3.2.2 The Hadamard Gate (H)

3.2.3 Phase and T Gates (for Universal Sets)

3.3 The Bloch Sphere Representation

3.3.1 Visualizing a Single Qubit State

3.3.2 Rotation Gates (R_x, R_y, R_z)

Chapter 4

Multi-Qubit Gates and Universality

4.1 Entangling Gates

4.1.1 CNOT (Controlled-NOT) Gate

4.1.2 Controlled Phase and SWAP Gates

4.2 Universal Gate Sets

4.2.1 What Does Universality Mean?

4.2.2 Clifford + T Set

4.3 Simple Quantum Algorithms (Examples)

4.3.1 Deutsch-Jozsa Algorithm

4.3.2 Quantum Parallelism in Practice

Chapter 5

Quantum Algorithms I: Searching and Factoring

5.1 Mathematical Tool: Quantum Fourier Transform (QFT)

5.1.1 Definition and Purpose

5.1.2 Circuit Implementation Overview

5.2 Phase Estimation Algorithm

5.2.1 The Core Idea

5.2.2 Applications (Period Finding)

5.3 Shor's Factoring Algorithm

5.3.1 Problem of Factoring

5.3.2 The Algorithm's Structure

5.4 Grover's Search Algorithm

5.4.1 Unstructured Search Problem

5.4.2 Amplitude Amplification

5.4.3 Comparison: Speedup vs Classical

Chapter 6

Quantum Communication and Information Theory

6.1 Quantum Information Compression

6.1.1 Von Neumann Entropy (Simple Definition)

6.1.2 Quantum Data Compression (Schumacher)

6.2 Communication Protocols

6.2.1 Quantum Teleportation

6.2.2 Superdense Coding

6.3 Security Through QKD

6.3.1 BB84 Protocol (Discrete Variable QKD)

6.3.2 E91 (Entanglement-Based QKD)

Chapter 7

Quantum Algorithms II: NISQ Algorithms and Hybrid Computation

7.1 The NISQ Era

7.1.1 Hardware Limitations and Noise Models

7.1.2 The Need for Hybrid Algorithms

7.2 Variational Quantum Eigensolver (VQE)

7.2.1 Algorithm Framework

7.2.2 Classical Optimization Loop

7.3 Quantum Approximate Optimization Algorithm (QAOA)

7.3.1 Optimization Problems (MaxCut, etc.)

7.3.2 Circuit Structure and Parameterization

7.4 Quantum Machine Learning (QML)

7.4.1 Hybrid Training Approaches

Chapter 8

Quantum Sensing and Metrology

8.1 Limits of Measurement

- 8.1.1 Classical Noise and the Shot Noise Limit
- 8.1.2 Quantum Enhanced Sensing
- 8.1.3 Heisenberg Limit

8.2 Key Techniques

- 8.2.1 NOON States (for Phase Estimation)
- 8.2.2 Squeezed States (Intuitive)

8.3 Specific Sensing Applications

- 8.3.1 Quantum Magnetometry (NV-Centers)
- 8.3.2 Clock Synchronization

Chapter 9

Open Systems and Decoherence

9.1 System-Environment Interaction

9.1.1 What is Decoherence?

9.1.2 Amplitude and Phase Damping Models

9.2 The Density Matrix

9.2.1 Representing Mixed States

9.2.2 Pure vs. Mixed States

9.3 Introduction to Quantum Control

9.3.1 Quantum Zeno Effect (Concept)

9.3.2 Dynamical Decoupling (Concept)

Chapter 10

Quantum Error Correction (QEC) Fundamentals

10.1 Why QEC is Necessary

10.1.1 The Fragility of Quantum Information

10.1.2 Syndrome Measurement Concept

10.2 Basic Quantum Codes

10.2.1 The Three-Qubit Code (Bit-Flip)

10.2.2 Shor's Nine-Qubit Code (Overview)

10.3 Introduction to Stabilizer Codes

10.3.1 Stabilizer Formalism (Simplified)

10.3.2 Logical Qubits and Encoding

Chapter 11

Quantum Hardware Platforms

11.1 Key Hardware Requirements

11.1.1 Qubit Quality (Fidelity, Coherence Time)

11.1.2 Scaling and Connectivity

11.2 Major Qubit Technologies

11.2.1 Superconducting Qubits (Transmons)

11.2.2 Trapped Ion Systems

11.2.3 Photonic Quantum Computing

11.3 Control and Readout

11.3.1 Pulse Generation Overview

11.3.2 Measurement Process

Chapter 12

Quantum Networking and Future

12.1 Quantum Networks vs Internet

12.1.1 Goals and Challenges

12.1.2 Quantum Repeaters (Concept)

12.2 Distributed Quantum Services

12.2.1 Quantum Clock Synchronization

12.2.2 Secure Multiparty Computation

12.3 The Road to Fault Tolerance

12.3.1 Threshold Theorems (Intuitive)

12.3.2 The Quantum Ecosystem
